By J B Murphy

Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Operative Surgery of the Gall Tracts With Original Report of Twenty Successful Cholecystenterostomies by Means of the Anastomosis Button, 1894 Second, we will consider the functions or physiology of the gall bladder and gall tracts; for good surgery is based on good physiological principles, and good operations must be executed on good anatomical lines. Third, we will take up the individual operations, and the special indications for each. The Gall Bladder. The fundus of this organ lies opposite the ninth costal cartilage, close to the outer edge of the rectus, the body itself is situated in a fossa on the under surface of the right lobe of the liver, having the quadrate lobe to its left. It is in immediate contact with the hepatic flexure of the colon, and the first portion of the duodenum. The gall bladder is of pyriform outline, and when full is seen projecting beyond the anterior border of the liver, coming in contact with the abdominal wall at the cartilage of the ninth rib. It extends almost directly backward, deviating...
