As a result of these developments, software project managers today have at their disposal an abundance of sophisticated tools that are potentially useful in helping them increase their effectiveness. And the number of these techniques continues to increase each year. Still, most software projects fail (McClure, 1981). Many organizations are finding that their people are still developing the same expensive, bug-ridden, unmaintainable software that they were developing before the new software engineering tools (e.g., structured programming) were introduced (Yourdon, 1979). A question that has frequently been raised (and appropriately so) is: who is to blame? Does the fault lie in the tools themselves, or are the tool-users, especially management, the real culprit?
